

CSE421 Moral Assignment

[MSMA | Summer 2025]

Answer all the questions in this form. You can submit only once even if you submit by mistake. Make sure that your answers are put correctly by refreshing the page.

Q1. Which of the following best describes morality?

1. A set of legally enforceable rules
2. Principles of right and wrong in human behavior
3. Technical guidelines for IT professionals
4. Computer security standards

Q2. Ethics differs from morality because

1. Ethics is about personal values, morality about laws
2. Ethics provides structured frameworks for moral choices
3. Morality deals with technology, ethics does not
4. Ethics is stricter than morality

Q3. You have helped one of your friend but that costed you a lot. Under which consequentialist ethical theory this falls in?

1. Egoism
2. Utilitarianism
3. Altruism

Q4. Who forms the largest category of computer criminals?

1. Hackers who explore systems “for fun”

2. Outside users such as customers or suppliers
3. Employees who are disgruntled or dishonest
4. Organized crime groups involved in forgery and counterfeiting

Q5. Codes of ethics help IT professionals by,

1. Guaranteeing immunity from prosecution
2. Improving public trust
3. Helping in ethical decision
4. Encouraging piracy

Q6. Which of the following are key principles of computer ethics for IT professionals?

1. Staying updated in the field
2. Performing tasks outside one's professional expertise
3. Giving opinions based on evidence and remaining unbiased
4. Developing software regardless of ethical considerations
5. Maintaining loyalty to clients or employers and safeguarding sensitive information

Q7. Which activities are unethical IT user behavior?

1. Sharing licensed software with colleagues or friends
2. Using company software according to license agreements
3. Reporting security breaches to management
4. Using company email for spam
5. Following organizational IT guidelines

Q8. Which of the following best describes spyware?

1. Tracks your online movements, monitors what you click on, and records browsing habits
2. Uses your computer for hidden tasks, like sending spam or being part of a botnet
3. Software that encrypts your files and demands ransom
4. Software that automatically updates your operating system

Q9. Match the appropriate software license type of each of the scenarios

Public Domain	Freeware	Shareware	All Rights Reserved
---------------	----------	-----------	---------------------

1. You download a program for free, but the developer still retains control over distribution and usage.
2. A software trial lets you use all features for 14 days; after that, you must pay to continue or unlock extra features.
3. The program was created by a government agency and anyone can copy, sell, or modify it without restriction.
4. A commercial software requires a purchased license before any use; copying or sharing it without permission is illegal.
5. You find an old utility program online that is free to use, but no one claims ownership and no copyright applies.

Q10. Match the scenarios below with appropriate types of exploits

Virus	Worm	Trojan Horse	Spam	Smishing	Rootkit	DDoS Attack
-------	------	--------------	------	----------	---------	-------------

1. A program disguised as a free PDF reader deletes important files on your computer once you open it.

2. You receive a text message that looks like it's from your bank asking for login credentials; the link actually captures your password.
3. A malicious program is hidden inside a software update that users believe is legitimate.
4. An attacker creates software that automatically spreads itself to every device on a local network without user action.
5. A sudden flood of internet traffic targets a website, making it crash and become unavailable.

Q11. Discuss three types of cybercrimes relevant to Bangladesh and their impacts.

Q12. Describe three ways IT professionals can implement trustworthy computing to ensure secure, private, and reliable computing experiences.

Q13. Your uncle, who is not familiar with technology, has started a successful clothing business and wants to create a Facebook page to promote it. He does not have a Facebook account and asks you to create the page for him, giving him the login credentials. The problem is he might forget the credentials. What would be your ethical approach in this situation?
